

Bank Express System™

Automated Bank-out Solution

Giesecke & Devrient
Creating Confidence.

Bank Express System™, combined with Compass Casino™, will not only automate the bank-out function inside your Satellite Employee Bank, but will also track and control all your cash balances. The Bank Express System solution is setting new standards of productivity and efficiency in the Satellite Employee Bank.

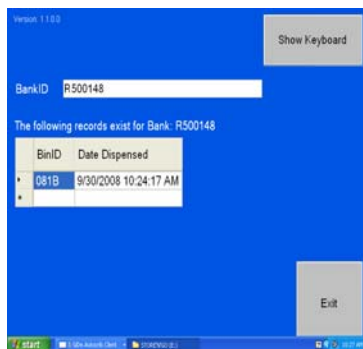

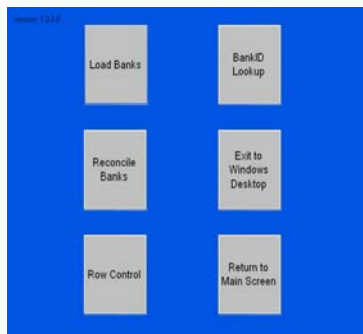

Simple & Fast – at G&D we understand that time is money so the Bank Express System was designed for efficiency and ease of use. With an average dispense time of seven seconds, your cashiers will be able to complete their back office transactions more efficiently thus allowing them more time to serve your guests.

Capacity – Bank Express System has been designed to provide controlled and secure access to 150 pre-assembled employee banks, each containing up to 1000 banknotes and up to 6 rolls of coin.

Efficiency – space is at a premium, so the Bank Express System was designed with a minimum footprint utilizing a mere 10 sq feet of valuable floor space.

Simplicity at its Best – three simple steps and your cashiers are done...

- Identify - Confirm - Dispense -

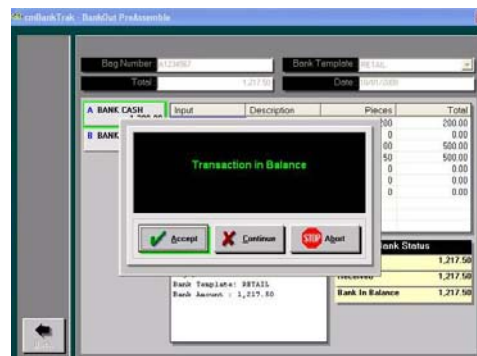

Compass Casino^{CM} is the latest product incorporating over twenty years of development and continued refinement of our industry leading Compass^{CM} software solution designed to meet the unique requirements of the gaming industry. Various modules of Compass Casino^{CM} control, record, and report on the non-gaming assets of a casino property. Cashier drawers, inventory control, and movement of cash and cash equivalents between inventory points are monitored and reported in both print and extracted file formats.

Designed with flexibility in mind, Compass Casino^{CM} provides user-selectable switches to accommodate processing variations within each property. These switches can be set at the system, user, and individual cash drawer level allowing property-specific customization. New software releases and enhancements are backward compatible and protect data integrity while minimizing the impact on casino operations.

Compass Casino^{CM}, unlike hardware-based products, is a powerful and comprehensive solution which allows for end-to-end tracking, managing, and balancing of all non-gaming assets. Its flexibility and hardware independence makes it an effective and efficient tool in managing and controlling cash and cash equivalents.

Compass Casino^{CM} BankTrak module tracks cashier drawers from issuance to final settlement and offers the following features:

- Pre-assembly of cashier drawers to minimize the queuing at the cage
- Utilizing serialized (unique) bag numbers allows tracking of the bag from pre-assembly to final settlement. Bar code scanners eliminate manual key entry thus enhancing the productivity of this tracking method.
- Reporting by status highlights the entire movement of each cashier drawer from pre-assembly to 'Bank-out' to 'Returned' and 'Balanced'.
- Exception reporting and built-in monitoring features facilitate the identification of possible defalcation or misplaced drawers.
- Reporting the final settlement of cashier drawers in print or electronic form allows for timely reconciliation and accountability.

Bank Express System Highlights

Industrial strength for long-term reliability

Capacity of 150 pre-assembled banks

Transaction time of less than 10 seconds

Compass Casino^{CM} Interface
