

## Solution Brief

# AirOn360® Entitlement Server: Cross-Platform eSIM transfer between iOS and Android

The new release of Cross-Platform eSIM Transfer, enables operators of all sizes to support seamless eSIM migration between iPhones and Android phones – without QR codes or the need for a carrier app. Users simply place the two devices together and follow on-screen prompts.

Traditionally, transferring mobile plans – especially across platforms – has been time-consuming and frustrating, often requiring QR codes, customer support, and manual provisioning, all of which increase operational costs and have a certain intrinsic failure rate that can lead to customer churn.

An Entitlement Server (ES) enables mobile operators to manage various services on consumer devices.

The innovative AirOn360® Entitlement Server from G+D works with any eSIM platform. The Entitlements-as-a-Service (EaaS) concept streamlines the provisioning of mobile services like iOS feature registration, cellular watch activation, eSIM Transfer between devices, VoLTE, iMessage/FaceTime or Wifi calling and more.

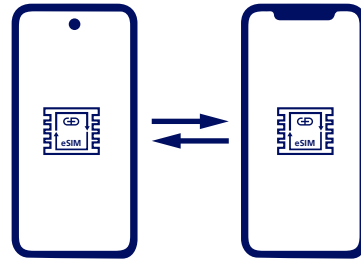

With AirOn360® ES, users can now transfer their eSIM profile effortlessly across most eSIM-enabled smartphones, regardless of OS or OEM, simply by placing the devices together and following on-screen prompts.

Cross-platform support is available to existing ES customers at no additional cost beyond standard eSIM transfer fees – and requires no extra development work from operators.

With just a **few clicks**, users can now move their **eSIM from iPhone to Android** or vice versa – without carriers having to invest in costly integrations. AirOn360® ES promises **no setup fees** and **no minimum transaction commitments**. Carriers can even trial the feature before deciding to scale.

# Cross-Platform eSIM transfer between iOS and Android

## 5 Key Highlights

### Truly cross-platform

Transfer eSIMs between iPhone and Android, or within the same platform – natively supported.

### Frictionless user experience

Intuitive websheet-assisted transfer complete in seconds.

### No extra work for carriers

No need to for new QR codes or help from a call center or carrier POS.

### No service disruption

Customers keep their number, plan, and carrier during the transfer.

### Fully OEM-compatible

Works with most major eSIM-enabled smartphones on iOS and Android.
