Munich

Giesecke+Devrient

Microsoft links its Enterprise Mobility Management solution Intune with the eSIM Device Enablement Service (eDES) from G+D Mobile Security. This enables IT departments to centrally manage the mobile connections of eSIM-enabled end devices in their companies.

Mobile contracts for Windows devices with eSIM can be activated, modified and managed online by IT departments without burdening employees with these processes. By eliminating manual processes from eSIM connectivity through this "zero touch" management, companies save costs and shorten the time to deploy new mobile contracts.

G+D Mobile Security presented the eDES to the public for the first time at the Mobile World Congress 2019 in Barcelona. The service is a holistic solution for companies that want to benefit from fully digitized mobile device management and also offers mobile operators the opportunity to monetize corporate solutions.

"G+D Mobile Security is excited to extend our eDES solution to support Microsoft Windows customers to ensure their enterprise connectivity is seamless and transparent," commented Edgar Salib, Head of G+D Mobile Security in the Americas. "Our best-in-class features for eSIM device enablement are a great fit with the support structure for Microsoft."

Shai Guday, Partner Group Program Manager, from Microsoft said, "We are always excited to see more customers taking advantage of eSIM capabilities on Windows devices. G+D Mobile Security's eDES solution makes access to data connectivity more available to the enterprise, providing corporate IT with the ability to seamlessly deliver connectivity for their enterprise users."

The solution is available for commercial deployment from August 2019.

About G+D Mobile Security

G+D Mobile Security is a global mobile security technology group headquartered in Munich, Germany. The company is part of the Giesecke+Devrient Group. G+D Mobile Security has around 5,300 employees worldwide and generated sales of around 868 million euros in the 2018 financial year. More than 40 sales offices and more than 20 certified production and personalization locations worldwide ensure international customer proximity.

G+D Mobile Security manages and secures billions of digital identities over their entire lifecycle. Our products and solutions are used daily by banks, network operators, manufacturers of mobile devices and automobiles, health insurance companies, private and public transport companies and their customers to secure mobile payment, communication and interaction between devices.
