

Munich Security Conference benefits from Veridos' innovative authentication technology

2019-02-22

Berlin

Giesecke+Devrient

Veridos, a world-leading identity solution provider, has successfully deployed its VeriGO® eAccess solution at the Munich Security Conference (MSC). The MSC is a high-level conference that brings together key decision makers of the international security community every year in Munich. For this year's event, Veridos created innovative walk-through portals and software that verify the visitors' identity by reading badges on-the-move.

The MSC is constantly adapting to the latest developments in security threats while at the same time focusing on maximum convenience for its participants. To reach these goals, Veridos deployed its VeriGO® eAccess solution at the event. The new technology improves verification, speed, and convenience: badge holders only need to step through the portal and their information is immediately verified through Veridos' advanced biometric face recognition technology.

The access cards, which are made of advanced material combined with security features, are produced by Giesecke+Devrient, Veridos' parent company, and equipped with high-security chips. Verification of the badges can also be carried out by specialized handheld RFID readers and smartphones, which then show the security personnel the provided picture of the participant for manual verification.

Dr. Benedikt Franke, COO of the MSC, stated: "We are delighted to have Veridos as a partner to provide us with this secure and convenient authentication solution for thousands of MSC 2019 participants. The verification times were significantly reduced and the traffic flow improved. We are looking forward to keeping using this technology in the future."

Frank Schmalz, Director of Innovations at Veridos, commented: "Our VeriGO® eAccess solution is based on secure ultra-high frequency RFID. It allows only authorized devices to read high-security contactless chips from a short distance. The result is a state-of-the-art authentication technology that has now been successfully introduced at the MSC and that can be implemented in any situation that requires reliable access control".

VERIDOS GMBH

Veridos GmbH creates secure identification and identity solutions for governments and public authorities throughout the world. Founded in January 2015, the joint venture between Giesecke+Devrient GmbH and Bundesdruckerei GmbH pools the expertise of the two largest German providers for high-security technologies to serve the international market.

The Veridos portfolio includes solutions for the production and personalization of passport documents, ID cards, driver's licenses, and healthcare cards. These are complemented by data management systems for personalization, issuance, and documentation, as well as solutions for personal identification, voter registration, and border control. In addition to its headquarters in Berlin and the operating facility in Munich, Veridos is represented around the world including in Brazil, Canada, Mexico, Singapore, the USA, and the United Arab Emirates.
