

## Passports go mobile with Veridos

2023-05-09

Berlin

Veridos

Veridos, a global leader in integrated identity solutions, presents a new solution for facilitating seamless travel. VeriGO MobileTravel Assist enables users to transfer personal data from their electronic passport to their smartphone via an app, which afterwards can be used to register for travel, to apply for visas or even to provide personal information to healthcare applications. The recipients of the data benefit from an easy-to-integrate solution to process high-quality data records.

With the VeriGO MobileTravel Assist app ([watch video ↗](#)) for Android and iOS, users can read personal data from the chip of their ePassport via NFC (near field communication), store it on their smartphone and transfer it to websites, apps and readers used by public authorities, tour operators or airports. Special wallet functions enable the management and transfer of multiple passport data sets, such as those of family members, in one go. The solution meets governmental requirements for handling personal information, as the data is completely protected by the app. It stores sensitive information in a dedicated space and establishes secure connections to the target systems for their transfer.

As VeriGO MobileTravel Assist does not require manual transmission of passport data, users save a lot of effort and time. Eliminating the need to switch between different media also minimizes opportunities for error. Recipients receive high-quality, signed and verifiable data for further processing in their systems. Since the records contain passport photos, they can also be used for personal visual checks. The solution's use cases are diverse: from registering with tour operators and applying for visas, to checking in for flights, dropping off baggage and boarding, or checking in at hotels. But scenarios beyond travel are also possible, such as verification for the purchase of age-restricted or particularly high-value goods, as well as providing personal information to healthcare platforms or even for know-your-customers (KYC) processes in banking transactions to protect against fraud or other abuses.

VeriGO MobileTravel Assist fully complies with the requirements of the International Civil Aviation Organization (ICAO) for digital travel credentials (DTC). This ensures the international compatibility of the solution with the systems of the data recipients – even if they are of official origin. All that is required to receive the data is the integration of a backend server and a front-end plug-in. The already well-established Veridos' digital travel authorization solution VeriGO SmartTravel is already equipped with the VeriGO MobileTravel Assist functionality as an optional feature.

“With VeriGO MobileTravel Assist, passports go mobile and take the travel experience to a new level,” explains Xavier Prost, Head of Identity Management Systems at Veridos. “Our solution covers the complete end-to-end process and allows for easy integration into existing online services with minimal effort. That way, it can bring many benefits to identity protection in the

digital space, such as preventing from identity fraud, improving accuracy, allow for faster service time and streamline processes. Our solution also ensures secure and GDPR-compliant handling of sensitive passport data at every step, while preserving privacy.”

## Veridos GmbH

Veridos is a world-leading provider of integrated identity solutions. Governments and public authorities in more than 100 countries trust the company’s uniquely comprehensive product portfolio. The company creates end-to-end solutions and services perfectly tailored to meet every government identity need. These range from paper to security printing, electrical chip components, enrollment, identity management systems, personalization and issuance, mobile ID solutions, and border control solutions including eGates. Governments can acquire best-in-class passports, ID cards, driver’s licenses, and more, or even the facilities to manufacture their own.
